Crescent Systems, Inc. Exhibits Capabilities At QUAD-A Summit

Nashville, TN – April 23, 2018

While exhibiting at the Army Aviation Association of America (QUAD-A) 2018 Summit, Crescent Systems, Inc. (CSI) booth personnel demonstrated the capabilities of the family of intelligent power devices and low-latency Video-over-IP (VoIP) products offered by CSI.

Demonstrations presented visitors with a software experience, both status and control, with IP connectivity to the various power and video distribution hardware units. Channel resets, lockouts, trip indication, system status, and system control were incorporated into the power device's demonstration. Two high-definition DirecTV video feeds and set-top box control, remoted to the exhibition from CSI's headquarters in Richardson, TX made up the VoIP demonstration.

As stated by Ryan Tinay, Director of Innovation for Crescent Systems, Inc. "The focus of our development and research teams this year is on a mission system's infrastructure; producing hardware and software products that enhance the mission system's power and multi-level secure video, voice, and data architectures. Robust mission system's infrastructures offer our customers with reliable and highly available distribution of mission critical data."

About Crescent Systems, Inc.

Crescent Systems, Inc. (CSI) is a privately held Woman Owned Small Business (WOSB) with several operating locations throughout the continental United States. Founded in 1995 initially to address the Defense community's multi-level secure defense messaging needs, CSI is a technology integrator providing multi-level secure technical solutions to National and Nuclear Command, Control and Communications customers.

Our trusted solutions are implemented through robust secure voice, video and data multi-domain architectures and devices engineered to operate. As an established Systems Integrator supporting the Aerospace and Defense industry over the last two decades, CSI has a proven reputation for designing, developing and certifying products and systems for integration into harsh and austere environments.
