Crescent Systems, Inc. Announces Strategic Partnerships with Small Business Aircraft Integration Experts

Roseville, CA – April 30, 2018

Today, Crescent Systems, Inc. (CSI) announced the formation of a small business consortium focused on airborne mission systems integration. The unified capabilities of Crescent Systems, D&J Aviation of Colorado Springs, CO and IKHANA Group of Murrieta, CA establishes a strategic partnership that exploits each of the company's core competencies in Systems Engineering, Product and Software Development, Internal/External Aircraft Modification and Integration and Airworthiness Certification.

"What makes these partnerships exciting is that we can provide our customers with an efficient and effective "turn-key" mission systems acquisition," states Ryan Tinay, Director of Innovation of Crescent Systems, Inc. "By partnering with aircraft integrators with the talent level offered by D&J and IKHANA, we confidently present our customers with holistic mission system solutions that begins with product and software development through airworthiness certification. These efforts all accomplished under a small business umbrella; an alternative to traditional "big business" acquisitions which can be lengthy and less affordable."

About Crescent Systems, Inc.

Crescent Systems, Inc. (CSI) is a privately held Woman Owned Small Business (WOSB) with several operating locations throughout the continental United States. Founded in 1995 initially to address the Defense community's multi-level secure defense messaging needs, CSI is a technology integrator providing multi-level secure technical solutions to National and Nuclear Command, Control and Communications customers.

Our trusted solutions are implemented through robust secure voice, video and data multi-domain architectures and devices engineered to operate. As an established Systems Integrator supporting the Aerospace and Defense industry over the last two decades, CSI has a proven reputation for designing, developing and certifying products and systems for integration into harsh and austere environments.
